ICT Introduces Outlook Web Access

Information & Communication Technology is announcing Outlook Web Access (OWA) for users who have been migrated to Microsoft Active Directory (AD). As you migrate to AD you will gain the powerful benefits of OWA! Benefits include an Outlook client that looks like the one you currently have on your desktop campus and increased functionality over the WesNet client you are currently using.

During February and March of 2008 all users at the university will complete the migration to Microsoft Active Directory and will begin to experience the benefits of OWA. Until you are a part of Active Directory please continue to use the WesNet link on the Texas Wesleyan University web page. As you become part of AD use the new link for OWA and refer to the CETL Quick Start Up Guide for details.
