ICT Expands University Wireless Network

Information & Communication Technology (ICT) has completed the final phase of a project designed to bring wireless network access to the Brown-Lupton Campus Center and Dora Roberts Dining Hall on the Historic Campus. Students and employees are now able to access e-mail and other Internet resources inside each building using a wireless-capable notebook computer.

“The completion of the Brown-Lupton/Dora Roberts wireless expansion project brings us a step closer to one of our major goals: a wireless network that can be accessed by each student and employee from anywhere on the Historic Campus,” said SW Hollingsworth, CIO.

For information on how to access the wireless network, visit the IT Training page of the ICT website:
